

Looking Into the South Pole Direct Energy Weapon Conspiracy

The Joe Rogan experience Do you know the the wacky conspiracy theory And this is wacky about uh the South Pole The South Pole is some sort of a direct energy weapon weapon that there's like some station down there that they've uh pretended is just for receiving but it's actually for transmitting I have no idea if any of this is nonsense It's just fun It's fun when people talk crazy But this guy was on the Sean Ryan show and uh he is a air quotes whistleblower and he's explaining how he went down there and he read the operating manual for this device and that this device caused the earthquakes in Christchurch New Zealand And I was like what like what is this It's so hard to know if you're just a comic in Austin I know what's going down in the South Pole I mean like I said I can when whenever somebody is saying some wild shit to me I need I start asking them what other shit do you believe So I can know how believable you are because if you believe because you might be one of those people that just believes bullshit Easily here already He says give us give us some volume and every single door in the facility I had complete access to every compartment they manufactured What are you blowing the whistle on that There are technologies at the South Pole Station that people can't even consider that exist on this planet Directed energy weapons systems is something that people need to get in their vocabulary fast The Ice cube neutrino detector is not simply a passive listening device as presented for the science that they're claiming it to do It also has the capacity to transmit There are embedded in the ice what are called digital optical modules Domes they're about the size of a basketball The array embedded in the ice is one kilometer by one kilometer by one kilometer It is the world's largest telescope and now because we have proven that it can transmit it's the world's largest directed energy weapons system It is responsible for the earthquakes in Christchurch New Zealand I physically ok When he says one kilometer by one kilometer by one kilometer does he mean it's one kilometer high It's one kilometer long and one kilometer wide a whole kilometer into the ground He could have just had a cube kilometer Well it kind it kind of I mean it's more impressive I guess just to think about it goes a kilometer into the ground He's a former firefighter contractor for Raytheon exposed the company's alleged ability to create earthquakes worldwide Linking to hidden directed energy weapon systems at South Pole

Station So what is this how would how would being a fire how would a firefighter contractor have access to that I don't know how any of this is real I have no idea I don't know what his job was What's his name Eric Hecker I don't know man he had some nice patches on his jacket though I mean you full of shit until I see some proof you know extraordinary claims require extraordinary evidence It's like you saying some wild shit you got at least show me something good point Yeah because you were a firefighter contractor I don't feel like you would have the keys to the secret death rate You know what I think what he was saying was that he was reading the documents of the owner's manual and that's when he realized that it's capable of transmitting I believe he says that in the show Yeah But how would he but how again how would a firefighter have access to manuals and shit I don't know Yeah that's crazy And why he's still alive This is what the thing he's talking about is when I Google it Antarctic Muon and neutrino detector array is what it's called And it goes let me see what it looks The neutrino detector is real right But that the facility on top of it and whoa look what happens under the ground Holy shit But the reason it has to be so deep under the ground is is is so it's protected from uh so it's protected from like solar from like extra shit So they know when when it gets hit that it was a neutrino you know so it's it's it's real like a lot of the stuff he said was real But here's the thing we also know Joe is that the best place to hide the lies between two truths The best bullshit is they say a lot of true shit and they and they sneak the bullshit in there He was like oh yeah the neutrino detector is this and this this and this that and did you know it can make you it can make you gay Antarctic moon a nutri detector array the shield provided by looking f for only upward going neutrinos that must have passed through earth something no other known particle can do Oh wow So it's through earth right Neutrinos neutrinos don't interact with matter almost at all So that so that neutrino detector is way way way way down and they're waiting to see like sparks of light So they know that was a neutrino Wow Um But if it's but if they put it on if they put it on the surface I think they can't tell the difference between one that came because they're pouring out of the sun So they're looking for ones that uh that have passed through the earth that have come from other places Wow So they know they know for sure So every now and then it's it's so unlikely that one will interact with matter that like it doesn't happen that often you know Isn't it crazy They spent that much money to build that thing to find that out Yeah So so and and also so that's the other thing the thing this guy is saying I don't even understand how that would work How could it be

both things right How could it be a detector and also a transmit Because I think it's just a pool full of some special kind of water or some special kind of liquid that you know that it's it's enough where it makes a neutrino more likely to fucking hit a nucleus or something But so I don't understand how that could how that's gathering power that it can transmit I don't you know I don't I don't know the thing about people like that and I'm not saying this guy's not telling the truth But I'm saying when I see stories about like someone talking about like some alien base that's underground and there's just aliens down there And one of them shot at me with a laser beam if you were hiding some shit like one of the best ways to make it seem ridiculous that you're hiding some shit is get some guys out of his fucking mind to go tell some wacky ass story fill him full of lies Tell him Yeah You know we started the earthquake in Christchurch New Zealand It was started with this thing and then and then you tell him yeah it's actually a transmitter and then you have the guy go down and now everybody's like oh if that's kooky the idea of doing that is Cookie directed energy weapon is Kookie Well meanwhile it wasn't even that they got a real one somewhere So now they've discredited the whole idea of directed energy weapons and they got some shit out in the desert in Nevada That's real The government loves conspiracy theory I mean why wouldn't they If I was if I was running some top secret program like a directed energy weapon I would have someone give them bad information give them fake stories and then have them go expose it Like have someone who's like most likely to blab and then have that person give them this knucklehead story and then he goes out and says it and then everybody researches it You just tell Roseanne you tell Rose just tell Roseanne the secret tell her right before she goes on stage There's a direct energy weapon Yeah it's um you know it's one of those things man it's like I I don't have no fucking idea what they're capable of doing See that right there That's the red flag to me is a little red flag A self educated research investigator Fuck out of there That's worse than homeschooling that takes from as many odd life experiences and connects with others Eric was raised on Long Island Ok Yep Part of part of the Stargate project run by the CIA and the Dia what his childhood included being part of the Stargate project run by the CIA Dia Later on he experiences in the submarine service following that he became a plumber for some of the wealthiest people in the world back on Long Island What That's weird turn of events in 2010 Eric took a contract to work at the South Pole Station for a year Oh so he took it he went from being an amazing plumber uh to being a firefighter in in the

South Pole That's what he's saying Ok always the avid researcher It was not until Eric began working remotely throughout the state of Alaska They started making connections that his own life may not have been what he thought it was Now he's trying to help others See that things may not be as we were told three exclamation points Yeah see this is see this is the thing man that feels a little red flaggy Does it Yeah that feels real I mean what the fuck Yeah you can donate support on Patreon and shop as CBD products What does it say Yeah Well the thing is it's like babies telling the truth maybe but it's like would you trust a self educated doctor But if I wanted to obscure the truth I would tell I would tell everything to a wacky dude Yeah man See that's what that's what's gonna kill us It's the death of truth We can we can't tell what's true Look maybe that guy is honest maybe he's telling the absolute truth and maybe it's so crazy that we think that he's a loon because the story sounds impossible The story sounds impossible that they would hide some sort of a directed energy weapon in some beautiful project to try to detect neutrinos right You would think that that would be a really good way But but at the same time could they could they do both things We're too stupid Why would you why would you have to hide anything in the South Pole I mean ain't nobody going to but he's looking because that's a good place to do it
