

## Could the Government Keep Knowledge of Aliens a Secret?

The Joe Rogan experience But the question is like why would we assume that it's a biological entity It's doesn't have any windows It's this round thing that looks like a tic tac If there is some sort of advanced propulsion system some some revolutionary way of moving through space and time that the US government has developed you know in some black ops program that seems very likely impossible That seems more likely than aliens visiting us But there's more than one incident and there's a lot of these things and the possibility of alien life in the universe Although we've never experienced it seems rational it seems very rational And if you were going to study an emerging civilization that is both primitive and warlike and yet insanely technologically advanced to the point where they have nuclear weapons they could transmit video through the sky they have propaganda they have tracking of their citizens like that's us That's us right now And while we are these territorial primal beings with fucking nuclear weapons this would be a good time to start exposing yourself and to stop this nonsense and look the reason why we named uh the rooms of our club fat man and little boy is because in UFO lore that's when they started showing up after the detonation of the atomic bombs in Japan That's when the UFO sightings ramped up and they ramped up mostly in the US Right So that's interesting because the US was the one with the nuclear power So and we were the one who was doing a lot of fucking testing and also we have all these military bases who the fuck has more military bases than us who has more nuclear weapons pointed at other people than us We we have them all over the place And there's all these multiple sightings and eyewitness accounts of like very credible people who say these things have hovered over military bases It'd be pretty cool if uh these aliens were benevolent overlords and they were like hey my Children or maybe even so advanced intellectually that the concept of an overlord is preposterous and they're just biological management They're just there's just they're gardeners tending to make sure the weeds don't get out of hand and just like let this process continue to play itself out because this process of technological innovation is it's the everything that humans do It's what we do at the pinnacle of our creation is we make better technology Well I always wonder about fractals and whether or not like this idea of this being a simulation this being you

know uh like we are we are kind of replicating We are creating machines and doing our best to create them in our own image right And that's interesting you know that's because our the the mythologies that we subscribe to are the idea that this God that we pray to made us in his image And we're doing the same thing now with robots and and computers And that's an interesting thing that we see to do seem to have this sort of um paradigm this this this idea that that um that's the scaffolding for the way we think right And to what end and and why are we doing that Has it already happened But has it already happened Are we are we the result of that that um impulse that happened way longer a long time ago I think we are the shit throwing chimps that are gonna become the nuclear physicists We are the shit throwing chimps from 2001 that become Oppenheimer Yeah And then I think this thing that we become is integrated with technology it's probably some sort of a hybrid it's some sort of a cyborg because I think we're already like on the verge of merging you know all this talk of like neuralink and all these various things We watched this video the other day of this guy who is uh googling questions and getting answers in his head with his headpiece on Have you seen that thing Yeah That's so crazy Incredible Right So how long before that is like that's Pong I know but that's and then you have the Unreal Four Engine in 2023 That looks a movie of how long before that technology gets to the point where it's just supremely advanced And we we literally are like God But my question really is also the idea that that's engineering right That's a tool It's innovation But but but there's there's engineering So there there are two aspects to it One is uh getting information faster and stuff which doesn't get you closer to the truth but it gets you information faster There are endless facts but more importantly um I I always wonder like why we are given this I really believe that human potential is pretty much infinite whatever you can imagine and beyond we can do and we are doing we we seem to be doing this like think about how crazy that is I can wear a headset and I can do things with my mind and and look up the answer That's insane That's magic It's crazier than magic but there's a way to measure that and quantify that and replicate that So it's not magic I can do it and I can tell you exactly how I get there which is even crazier So uh what what is that what is that leading us to it is nudging us closer It's it's like the I think it's very significant that we're getting a better understanding of what it's like to be someone else We are It's it's really hard to say that an uh a Yanomamo Indian or whoever it might be is thinks about things differently than I do when I know so much about how all these human beings like someone in Iran um

someone in Jordan uh laughs and cries and bleeds at the same thing I do Uh you know we we we it's it's it's being prejudiced based on what that person looks like over there is becoming harder and harder to justify where it was before we knew about that We were like well those people over there are quote unquote savages or there this that and the other thing and I do think that we are getting a better understanding of what it's like to be each other and nudge and being nudged in the same direction I'm not saying we don't we don't but why and and uh it's interesting to think about where that's where that's leading us to to what to what understanding to what understanding And then when we have that understanding what are we going to do about that And are we going to pull it together and are the aliens here to make sure that we don't fuck it up That's the the beautiful idea The terrible idea is that it's all us and then it's all the big r and it's all just drones that we're doing because we don't want China and Russia know about it but we have insane propulsion systems that operate on gravity And I think it is but it seems it seems like both It seems like us and it also seems like there's some shit that we we just don't understand and I don't know if those people are telling the truth because if the people that are telling the truth that there's biological entities and this is what Jackie Gleason said that Nixon told him and Nixon took him on a they were drinking you know that famous story Who knows if it's true It's it's a legend but the legend is that Jackie Gleason and Nixon were drinking and that Nixon said you want to see some fucking aliens and they get on Air Force one and they fly to some air force base and they go to a place where they have a crashed UFO and they have biological beings that are in freezers and Jackie Gleason sees this and Jackie Gleason after that has a house built in upstate New York that looks like a UFO He became obsessed with UFO S after it there was a house it was actually for sale at one point in time Yeah So he has this house that he had shaped like a UFO and this is like who knows if this is a true story right Because it's like it was kind of sort of disputed his ex-wife told the story or something like that I forget Iii I think that kind of thing is actually impossible to keep secrets I don't think so You think generational like generations of of of government bureaucrats can keep something a secret They tell the the the people at the very highest level know about it It's very few people It's all very compartmentalized They monitor everyone's phone calls everyone's emails everything everyone does at a top secret clearance level I think you're right Definitely not Right I think it's impossible Listen man they can keep secrets People at high levels of military can keep secrets rotating out They're retiring they're dying Yeah they

probably wind up fucking Hillary Clinton and a lot of those dudes this is not this is not conspiracy Social club I I am not willing to um relinquish the idea that they can keep that secret Yeah but it's not just fun to believe in It is possible It's a physically possible thing to do especially if you have the right people and they're indoctrinated in the right way with top secret clearance And by the way it's not like these people don't tell their friends and it's not like there's a bunch of stories floating around because there are there's a shitload of stories I'm saying But why why would you like I would never keep that a secret I'd be like hey here's an alien here's the thing when you have senators and congressmen who find out about this and they find out that military contractors are the ones who have access to this stuff because the back engineering program has to involve someone who has the capability of recreating this So who would that be that would be the people that make jets if you got someone who's making you a fucking uh a stealth bomber and you have a crashed UFO th those are the people that you want discussing like what kind of things you've recovered from a fucking alien crash And can this be replicated Here's the problem here I mean don't you know me motherfucker because you don't know you might be wrong you're wrong You say you're wrong because you don't know This is the problem with your theory I'm sorry And I love that you want to believe in this and so do I but here's the problem There's no law there's no written law that says I'm not allowed to talk about aliens And I mean at the level the top levels of clearance like the most secret level there is no world where if I'm a government official and I take a bunch of pictures and I come before Congress and I go here's my evidence I'm blowing the whistle There are real aliens I don't think they would go after you for I'd never go to jail violating your top secret clearance because it's not violating my top secret clearance but it would be because I I'd never go to jail for that because they they I'd be like you're gonna put me in jail for exposing what everybody wants to know the whole world would be like holy shit You guys get this assuming that you have access to that material to extract people wherever the maybe maybe not maybe those are the kind of people that wouldn't do that Brian listen you fucking communist I don't like the way you think I'm blowing I'm I'm shredding your UFO No you're not You think you are But you're just using these establishments You're allowed to talk about UFO S and you never get in trouble You sound like your dad Come on man you're a CIA and you're in here spreading propaganda to the faithful listeners Listen to this listen to me There are no aliens If there are uh we'd know about it because if you're

gonna come back on dressed like a clown Agreed Agreed That's my bet I'm  
making with everybody now I'll dress up like a clown I'll do it
