

Jackie Gleason's UFO House and The Ongoing Alien Fascination

The Joe Rogan experience you know Jackie Gleason supposedly had an encounter with Nixon that Nixon and Gleason were buddies and they were drinking and it's a famous story that's disputed but apparently with let's go with it Gleason apparently had said um that Jackie Gleason and him were drinking and uh and Nixon was like you fucking UFO No way Yeah And and he flew him to see wreckage and they had uh frozen biological entities and they they got a chance to see these things that they had uh that they had frozen What Yeah What that must have been like early seventies something like that And Jackie Gleason wound up having a house built in the shape of a UFO afterwards That was for sale as recently as I think like a decade ago See if you can find that house in L A or something No it's in upstate New York but the house looks like a fucking UFO He he had a UFO house built Yeah Jackie Gleason apparently was obsessed with UFO S after the fact So this is Jackie Gleason's UFO and starred upstate upstate New York spaceship house And that picture makes it look bigger That's serious That's two different buildings they have in the guest house Oh I see Yeah Look at that That's amazing So Jackie Gleason became a UFO freak man I'm gonna do that after this That's a pretty cool looking house Yeah it's pretty dope Oh my God I wish that I wonder if it's still for sale to the mothership Woo I'm gonna talk to my wife about this and I get this is serious Right Well now you have this sig spear So they so there's a lot of UFO stuff on this sig spear So maybe this should be reserved for taking out the aliens when they come out Well well if they attack you I think if they do attack I think they could render you useless almost instantaneously But then too like why wouldn't they just sit back and watch I think they if I pass right by if I had to guess if I had to guess I mean this is the wildest of speculations I would guess that every civilization reaches a point of technological proficiency when they're also dealing with these territorial uh warring tribes where they have the ability to literally destroy the earth And that if this is a natural course of progression for intelligent beings they get to this point there's a transition where it gets very dangerous And if I was from another planet and I was monitoring this I would be there to make sure that they don't launch they don't And that's see that's the theme of the mothership comedy club is that the rooms are called Fat Man and little Boy And the reason why the rooms are called Fat Man and

little Boy is because that is a specific moment in UFO folklore when the aliens start arriving after the detonation of those bombs that's when you start seeing this massive uptick in sightings and interactions with fighter pilots and and and and these different military bases that have nuclear programs where the bases get shut down and all the power goes off Yeah there's like that's wild Yeah it's it's heavy stuff because if you think that they are they are watching that would make the most sense that they see that we have nuclear power we have the the the ability to blow ourselves up and we detonate two bombs and then they're like ok let's fucking let's let's go monitor these these assholes Let's go make sure that that's gonna affect the universe One country right now has them let's fucking specifically concentrate on them And then they have sightings in the Soviet Union when the Soviet Union has the capabilities And yeah there's a there's a ton of documented sightings and these encounters that happen And then before hand there's not really anything Very little very little very well I'm sure they've probably been visiting us if if they do visit us I would imagine they've been visiting us forever Like look they've got engines look they've got guns Look they've got this you know it would be fascinating to watch Like look at these territorial apes with nuclear weapons Like that's the time to watch right now They're probably just sitting back popping that popcorn and being like oh man it's getting interesting now It's getting closer and closer to our our fucking inevitable demise Like that's when the sightings are ramped up to the point where the Pentagon has to start talking and they are in front of Congress I mean that's wild but no one pays attention Let's go back to you know tiktok and Instagram I mean they kind of pay attention but it's not there's nothing that you could fucking put your fork into You know it's like what is it like And why are they telling us about this That's also there's a lot of cynicism when it comes to like why is the government telling us about UFO S a distraction you mean But what is it like what are they telling us because they really have this information and they they want to slowly leak it out because this is an inevitable contact moment and they want to prepare civilization or is it just horseshit Is it just they're distracting us And this is how they you know institute this drone program where they have this you know anti gravity device and they they can move at the same rates of speed I don't know I mean it's just guesswork That's crazy That's crazy You get to hear directly from these guys who've actually seen and experienced it and talk with them for a little bit I've talked to quite a few now quite a few that have that have seen these things and had these experiences But the Bob Lazar one

is uniquely compelling uniquely compelling because Bob is without a doubt a brilliant guy and and he was a legitimate propulsion expert who it's been proven He worked at Los Alamos labs and they tried to hide that They tried to lie about that and say that he wasn't but he he was on the employee roster He uh has uh an intimate knowledge of the facilities They took him George Knapp took him on a tour of Los Alamos He knew where everything was He knew the people there they knew him It's wild shit man Because if he's telling the truth he says it's not one that they've recovered but multiple and that one of them they think is really old and they got it from an archaeological dig They think that they've recovered this thing in the ground That's movie stuff I mean you see that you know we all watch it in movies and think it's science fiction but there's a lot of science fiction that has come to fruition from submarines to go into the moon to there's also a space travel in general flight just flying all of it Just like Buck Rogers No big deal
