

GDL Dr. Allan Fouloud

<https://silosolo.com/164026>

Summary

The video discusses techniques for reducing fullness under the chin, such as liposuction and a central neck lift. The patient in the photos achieved natural-looking results and increased confidence. There is a hereditary component to the fullness under the chin, and removing the excess fat can have a slimming effect on the face. The doctor also performed a buckle fat reduction to further enhance the patient's appearance. The oblique view of the patient shows the impressive results.

Silo sample questions

- What are the recommended techniques for reducing fullness under the chin?
- What is the difference between liposuction and a central neck lift?
- What is the hereditary component to the fullness under the chin?
- What other effects can reducing fullness under the chin have on the face?
